monitoring tool

THE END-TO-END SMART SOLUTION FOR YOUR PHARMACEUTICAL CARGO

Choose our new cutting-edge service designed to optimize the preservation of your product's quality and integrity. Thanks to CMA CGM's Reefer containers equipped with special electronic devices, our dedicated team of experts ensures 24/7 end-to-end monitoring of your pharmaceutical cargo.

YOUR BENEFITS

ENHANCE EFFICIENCY

A 24/7 Control Tower is on standby to trigger immediate corrective action in order to avoid cargo deterioration whether at sea or inland.

IMPROVE YOUR SUPPLY CHAIN

Following the identification of weak points, preventive measures are implemented on future shipments.

ENJOY TRANSPARENCY

A summary report is provided to ensure transparency throughout the supply chain. Data is also stored on the cloud and made available to customers on request.

HOW DOES IT WORK?

Throughout the duration of your cargo's journey, connected containers send real-time information to three operational centers in Marseille, Miami and Singapore, allowing end-to-end tracking of the following parameters:

- Temperature (inside and outside the reefer unit)
- Unplugging
- Humidity
- Geoposition
- Other technical parameters
